TMB 24x7 Fully Managed Server Operating System Service

Ensure the smooth running of your critical systems

The server is the often the beating heart of a business's IT, so keeping it in good health is vital. With TMB's 24x7 monitoring, you'll always know how your server or servers are performing and when they need to be upgraded. Furthermore, we'll make sure they're always patched and up to date, helping you avoid data loss and cyber attacks.

What's Included?

- Backup solutions management (supported products only)

- Antivirus management

- Trend analysis of any component or feature

- Availability analysis or statistics

- Server asset logging tracking and management

- Change management monitoring and recording

- Service and critical process management and monitoring

- Proactive monitoring of essential server components including memory, storage, processor activity and event logs
